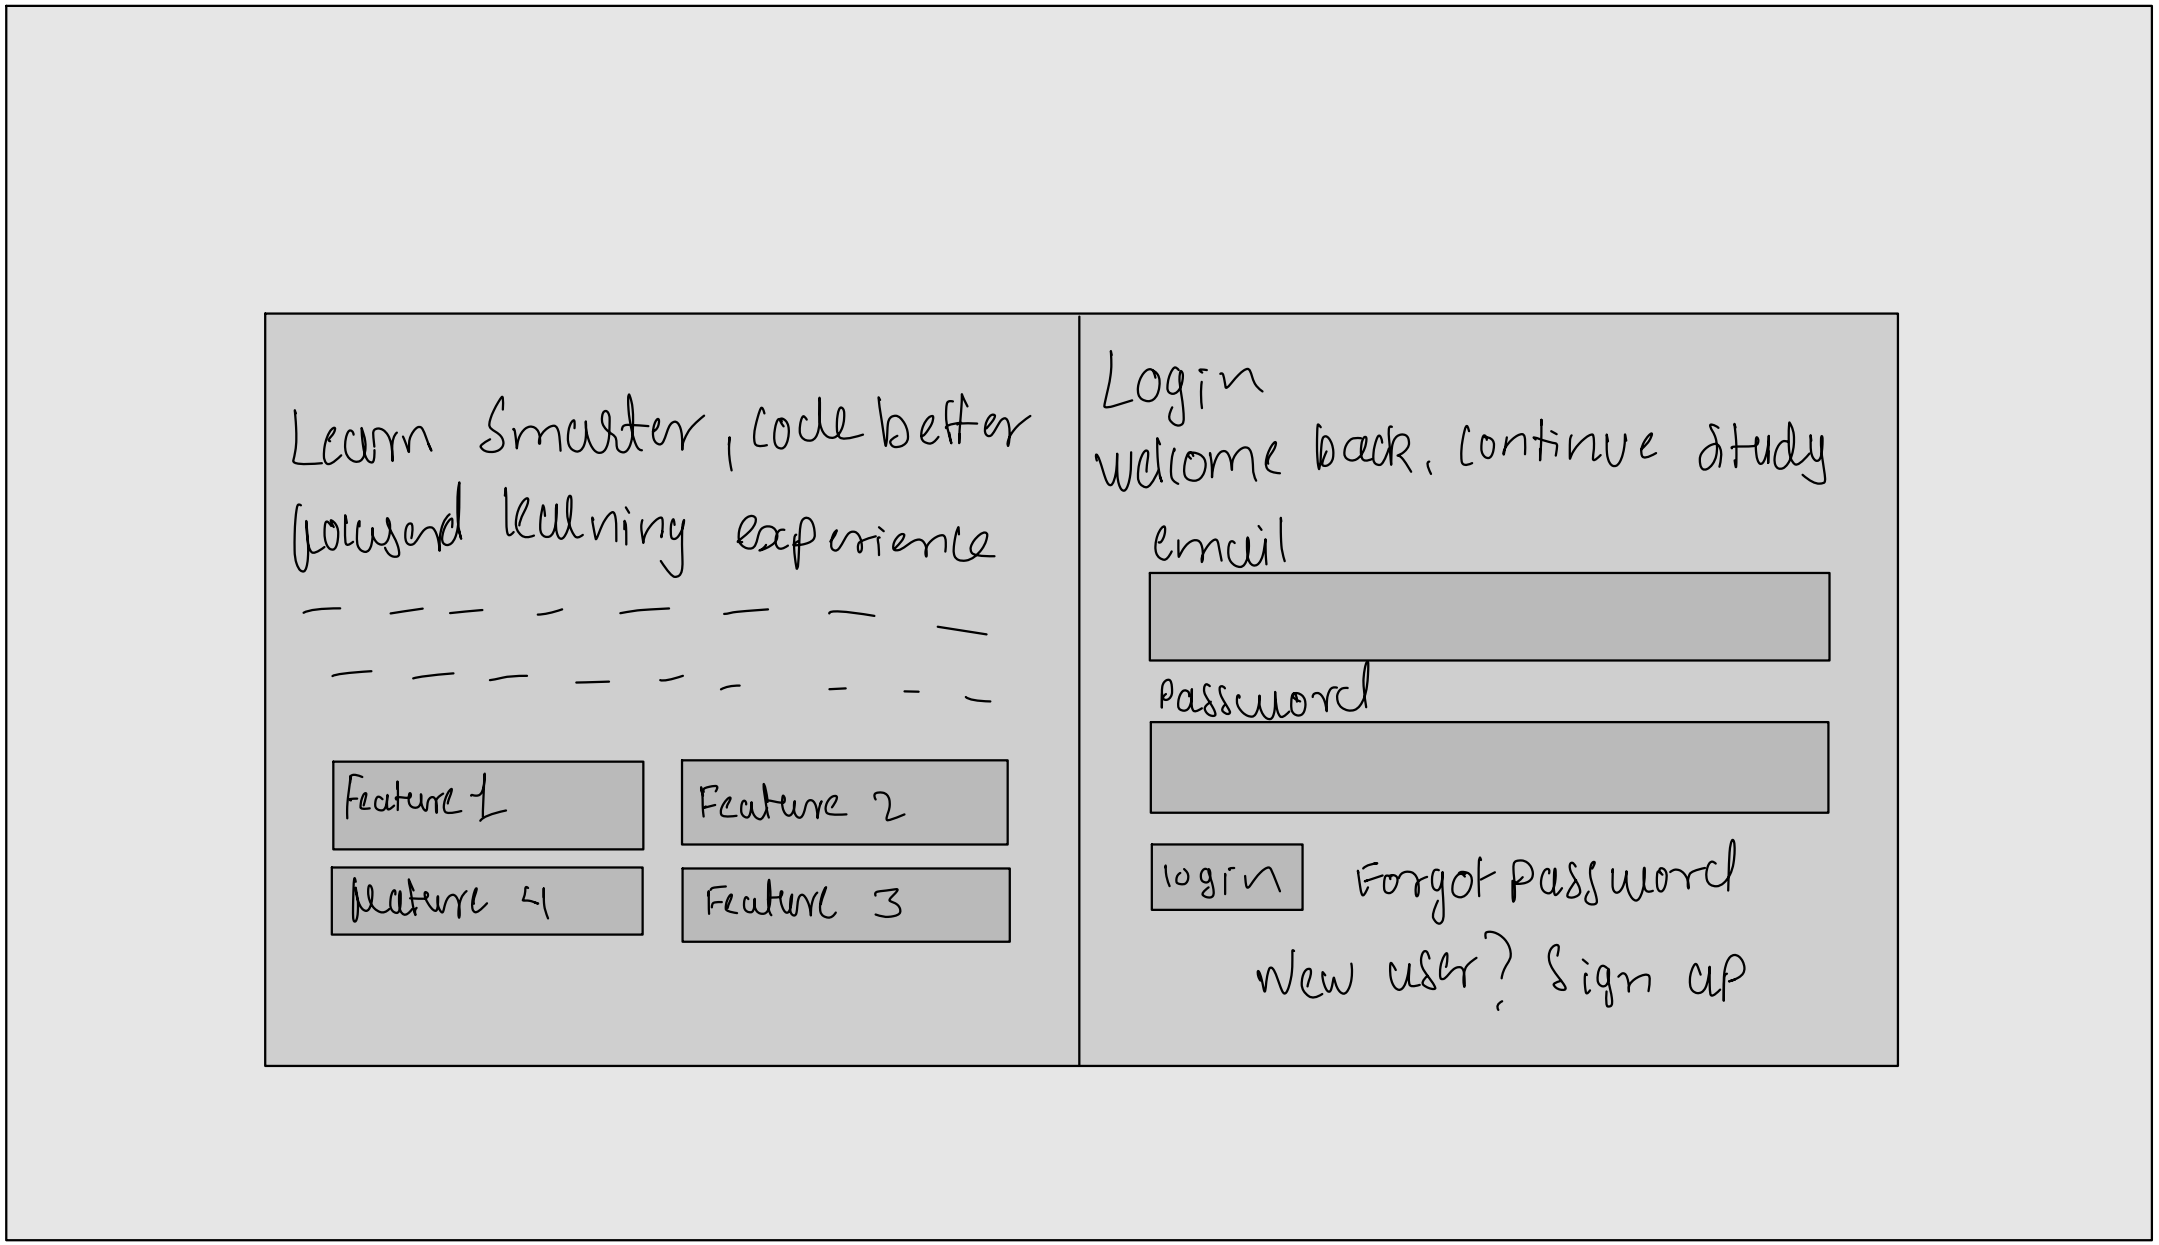
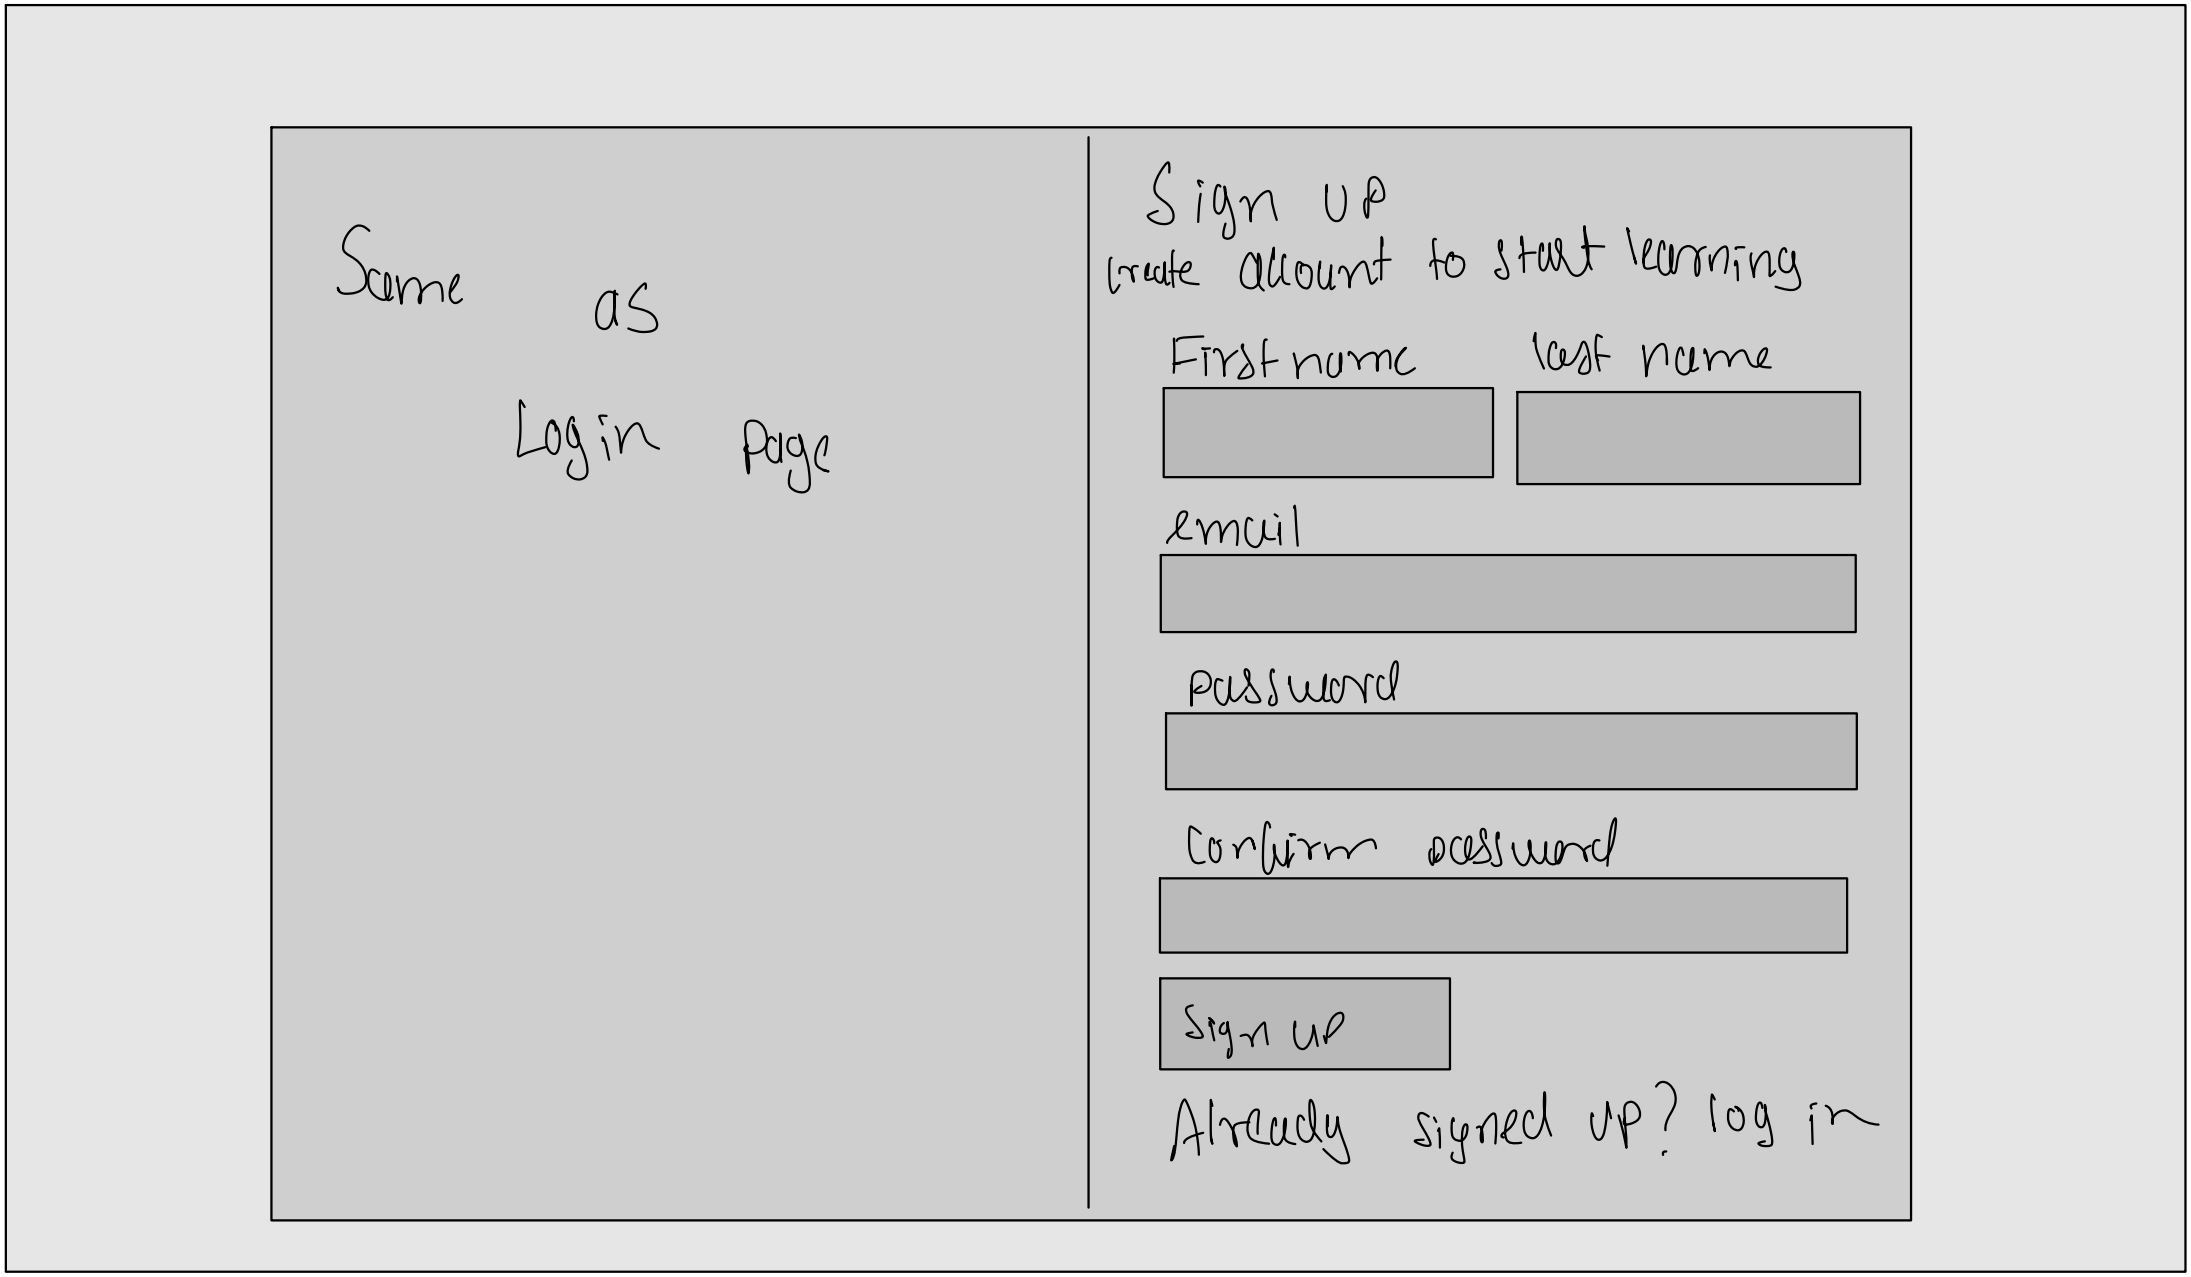
# Login Page



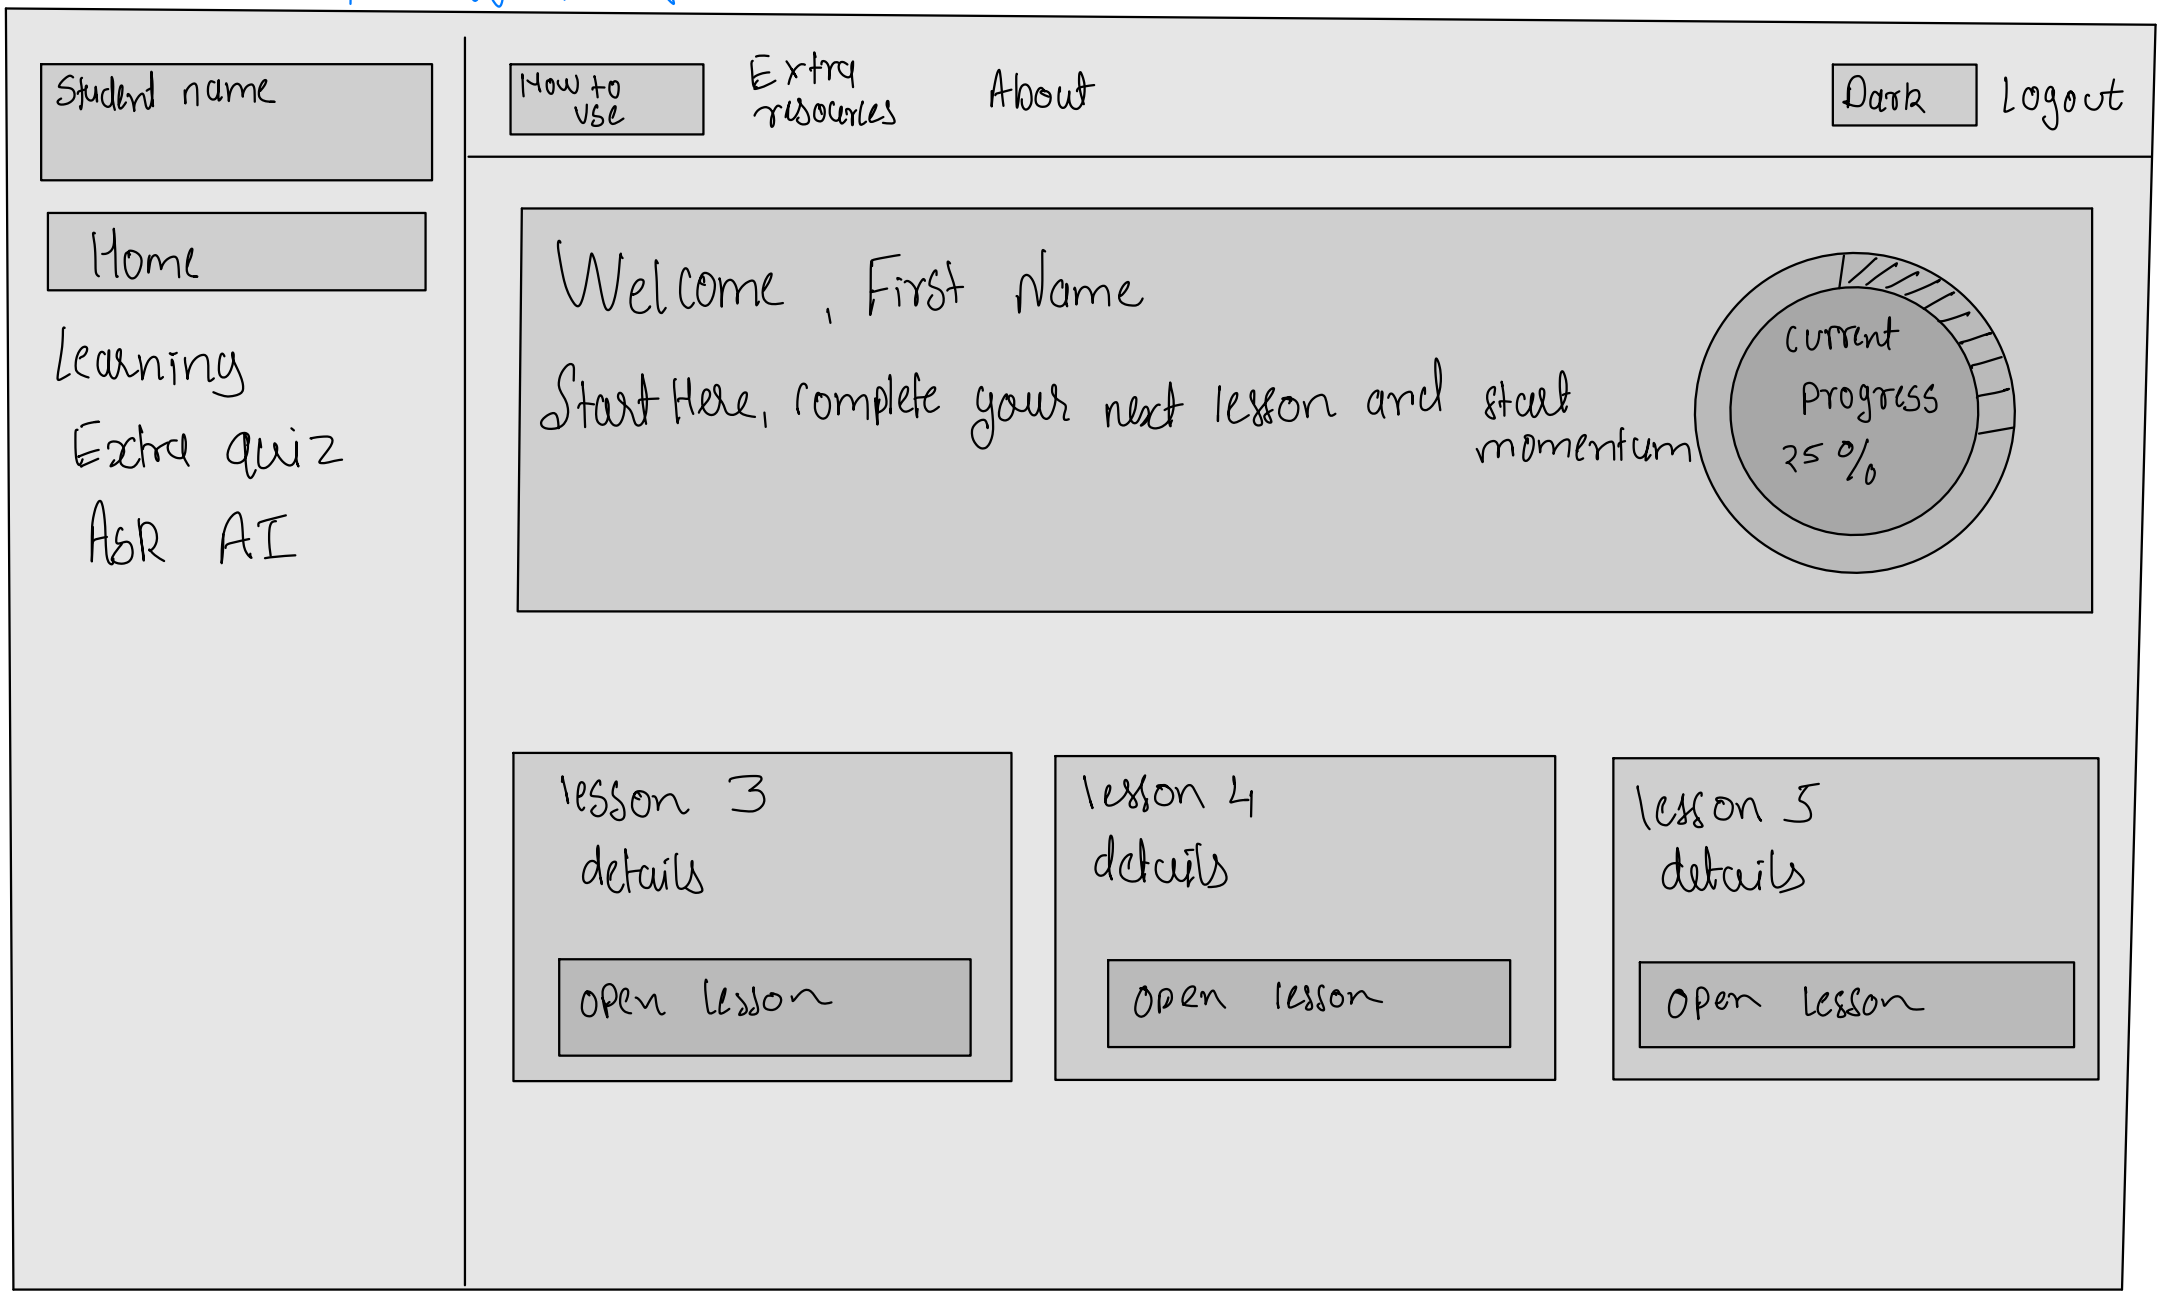
The login page is split into two sections. The left panel displays information about the website and its key features, while the right panel contains the login form with email and password fields and a Login button. It also includes a Forgot Password option and a sign-up link for new users.

# Sign-up Page



The sign-up page follows the same layout as the login page. The left panel displays information about the website and its features, while the right panel contains fields for first name, last name, email, password, and confirm password along with a Sign Up button. It also includes a hyperlink for existing users to return to the login page.

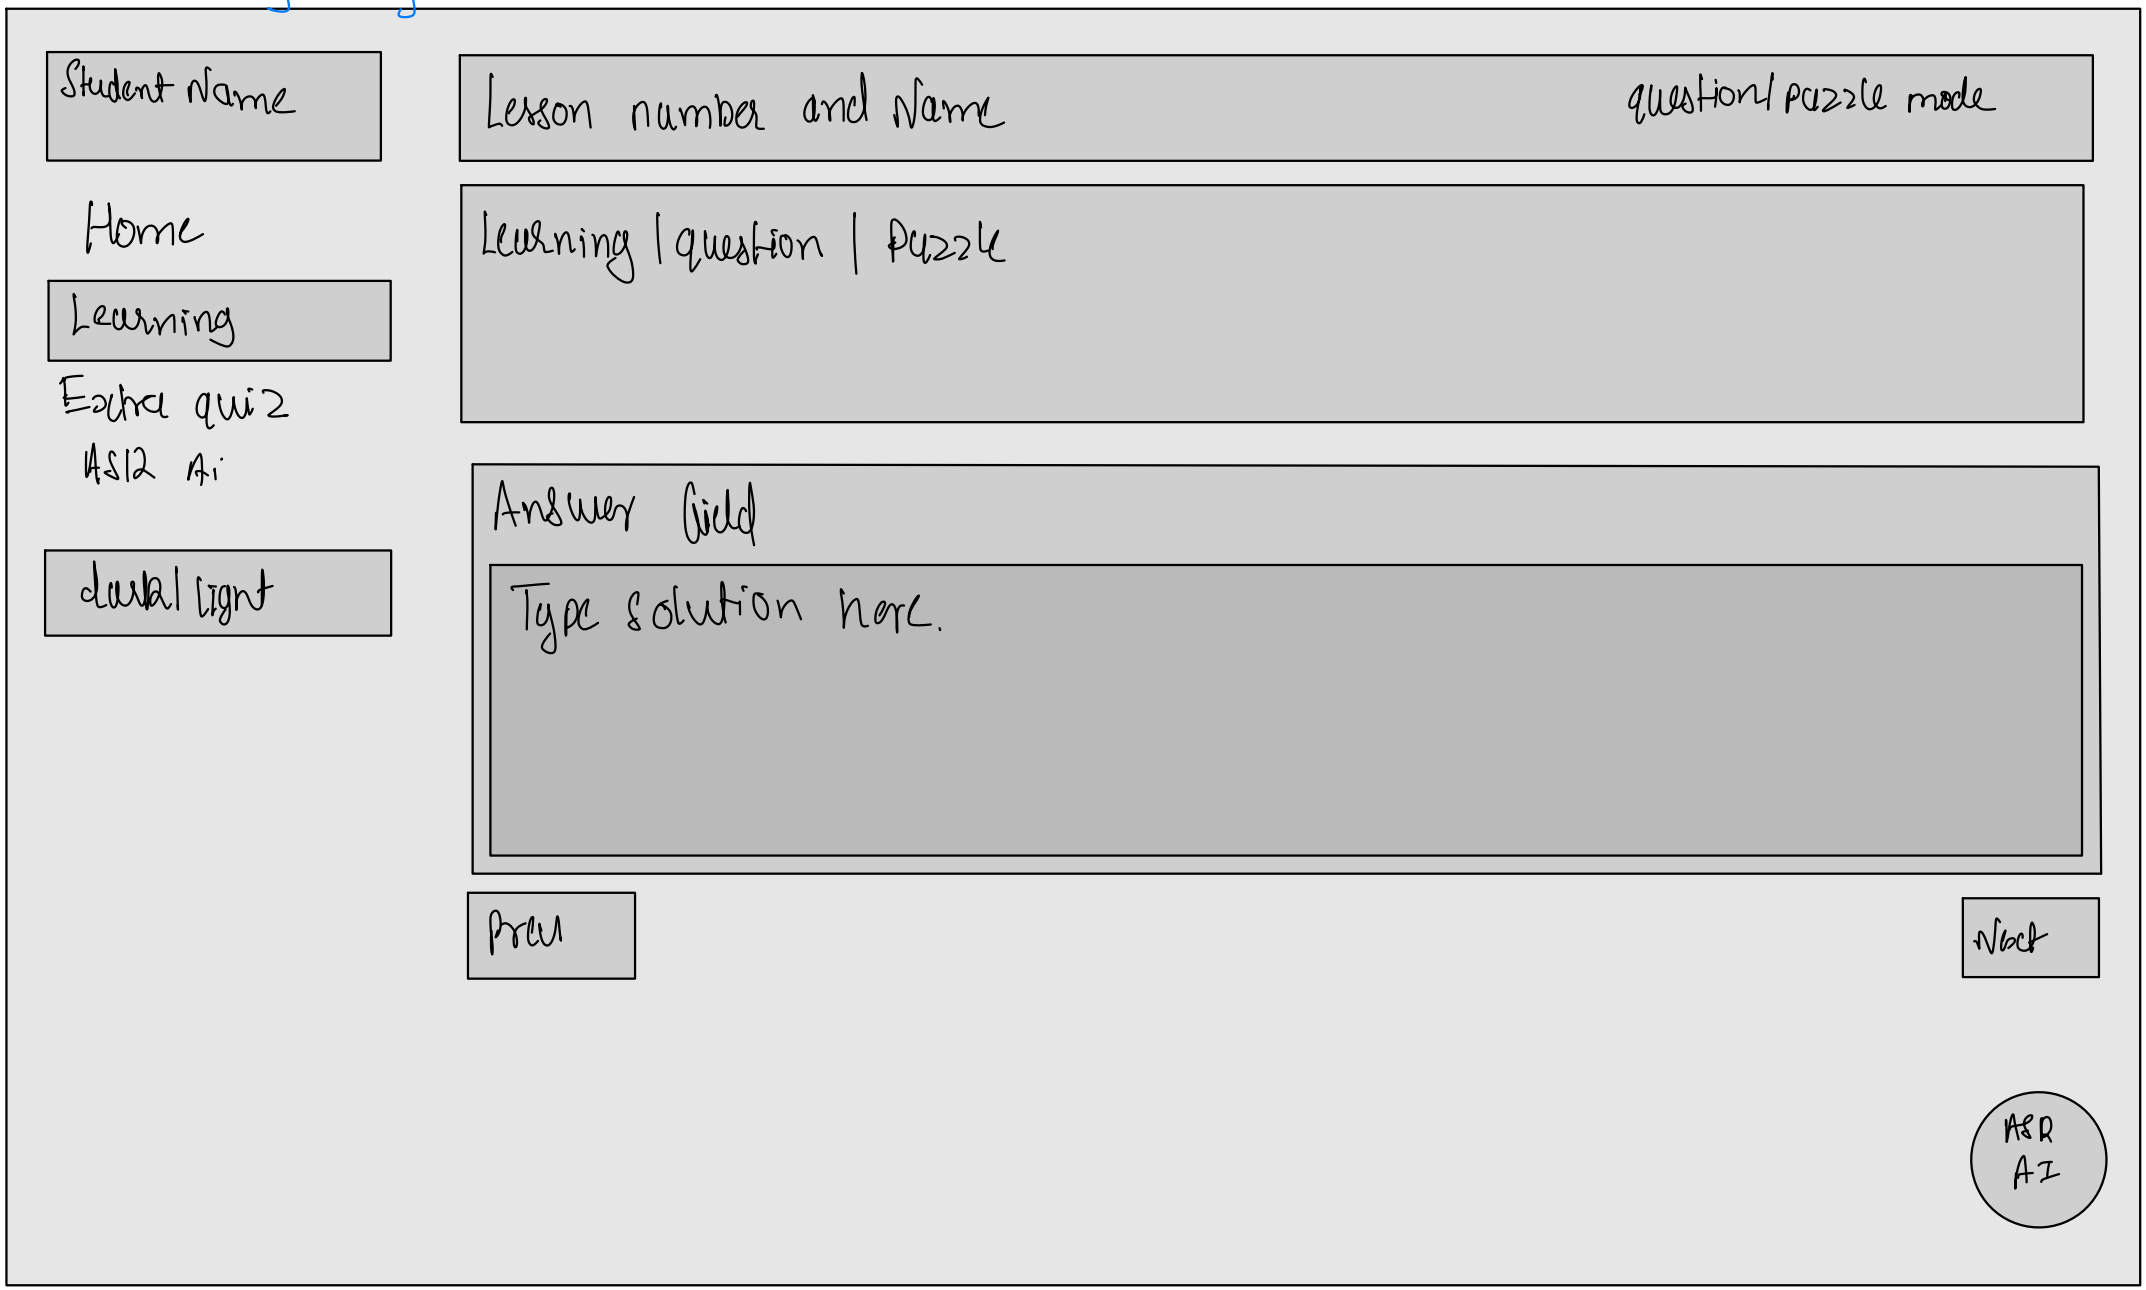
# Dashboard | how to use



The dashboard (How to Use page) serves as the user's main interface. It displays the user's first name, available lessons on the home page, and overall learning progress.

A left-side navigation bar includes the student name and links to Home, Learning, Extra Quiz, and Ask AI, while the top navigation bar provides resources, an About section, a dark-mode toggle, and a Logout option.

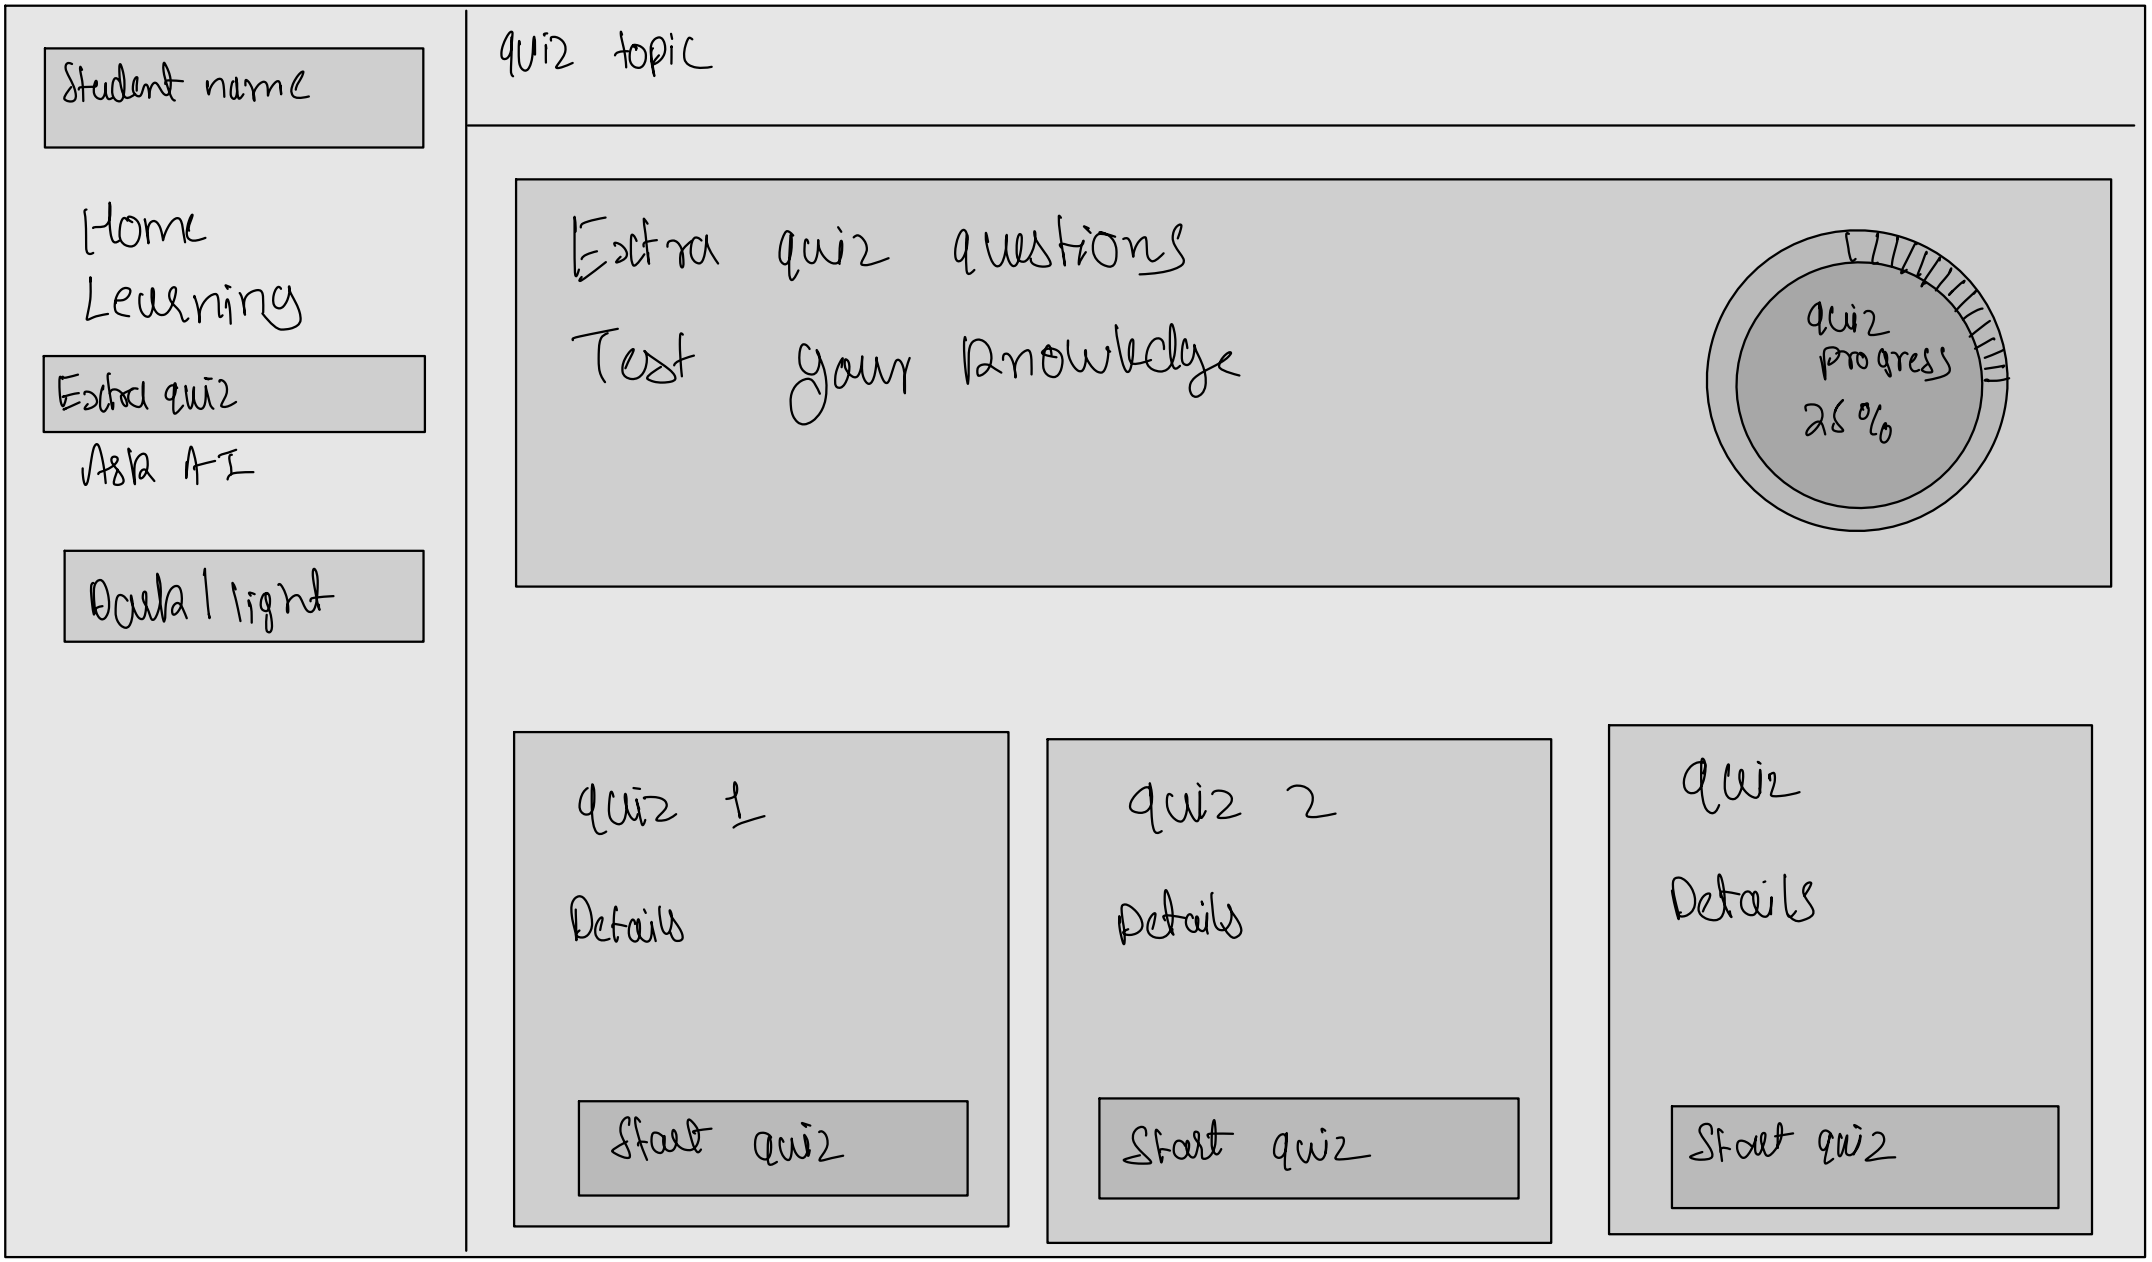
# Learning Page



On the Learning page, the top navigation bar is removed, but the left sidebar remains visible. The layout changes depending on the activity — learning content or a question/puzzle.

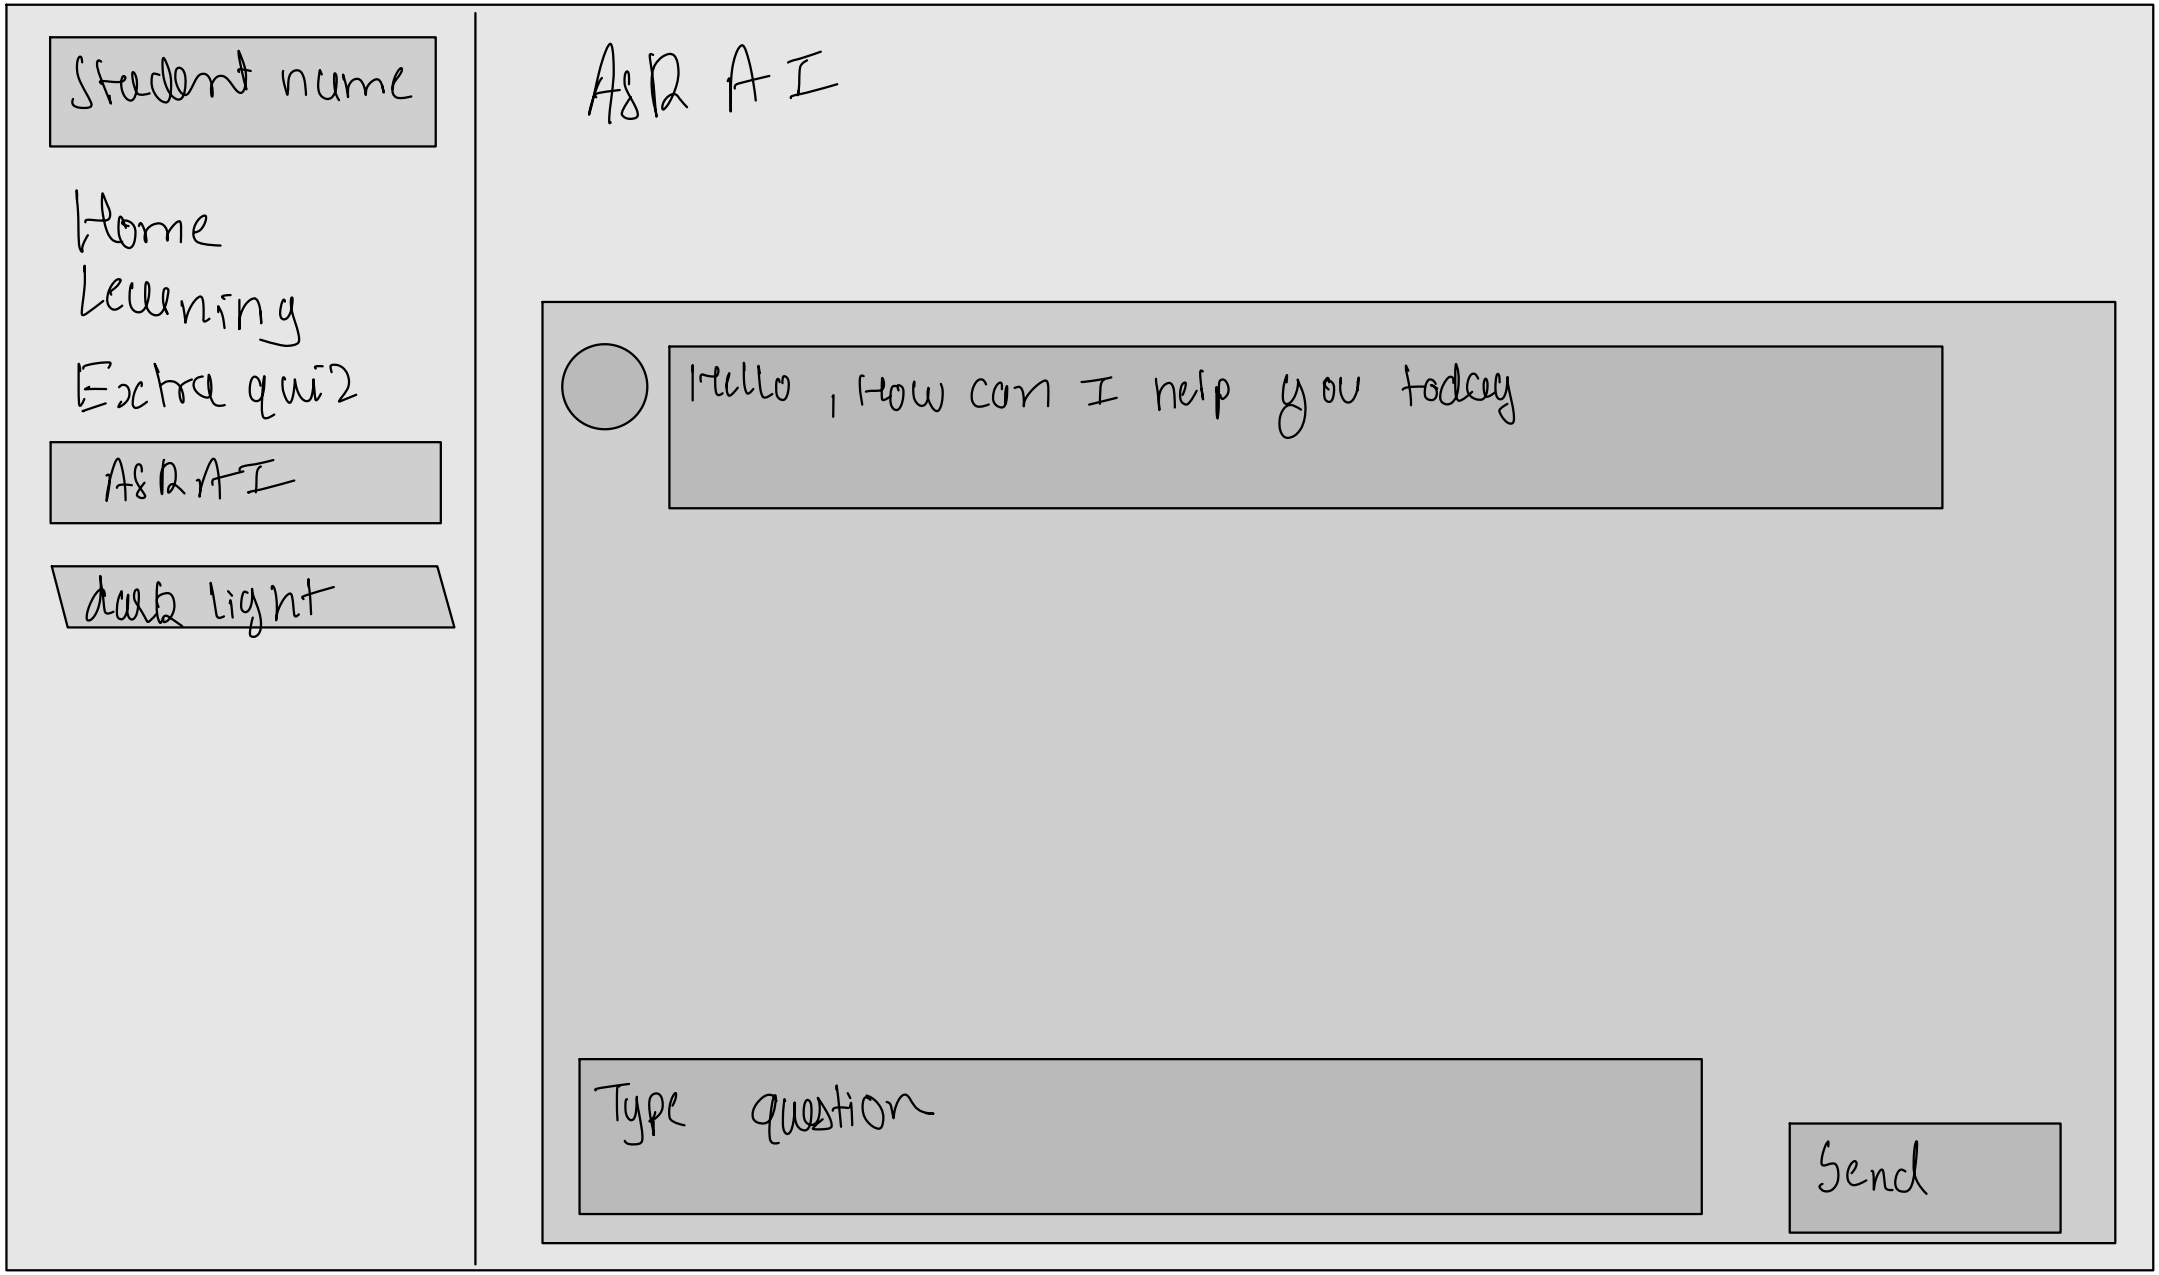
If it is a lesson, the top section displays the lesson number and title, followed by a large content block. For quizzes or puzzles, the page shows the prompt with an answer field below it. The page also includes Previous and Next buttons to navigate between lessons, quizzes, or puzzles.AI button helps to get in deep about the same content on screen

# Extra quiz page



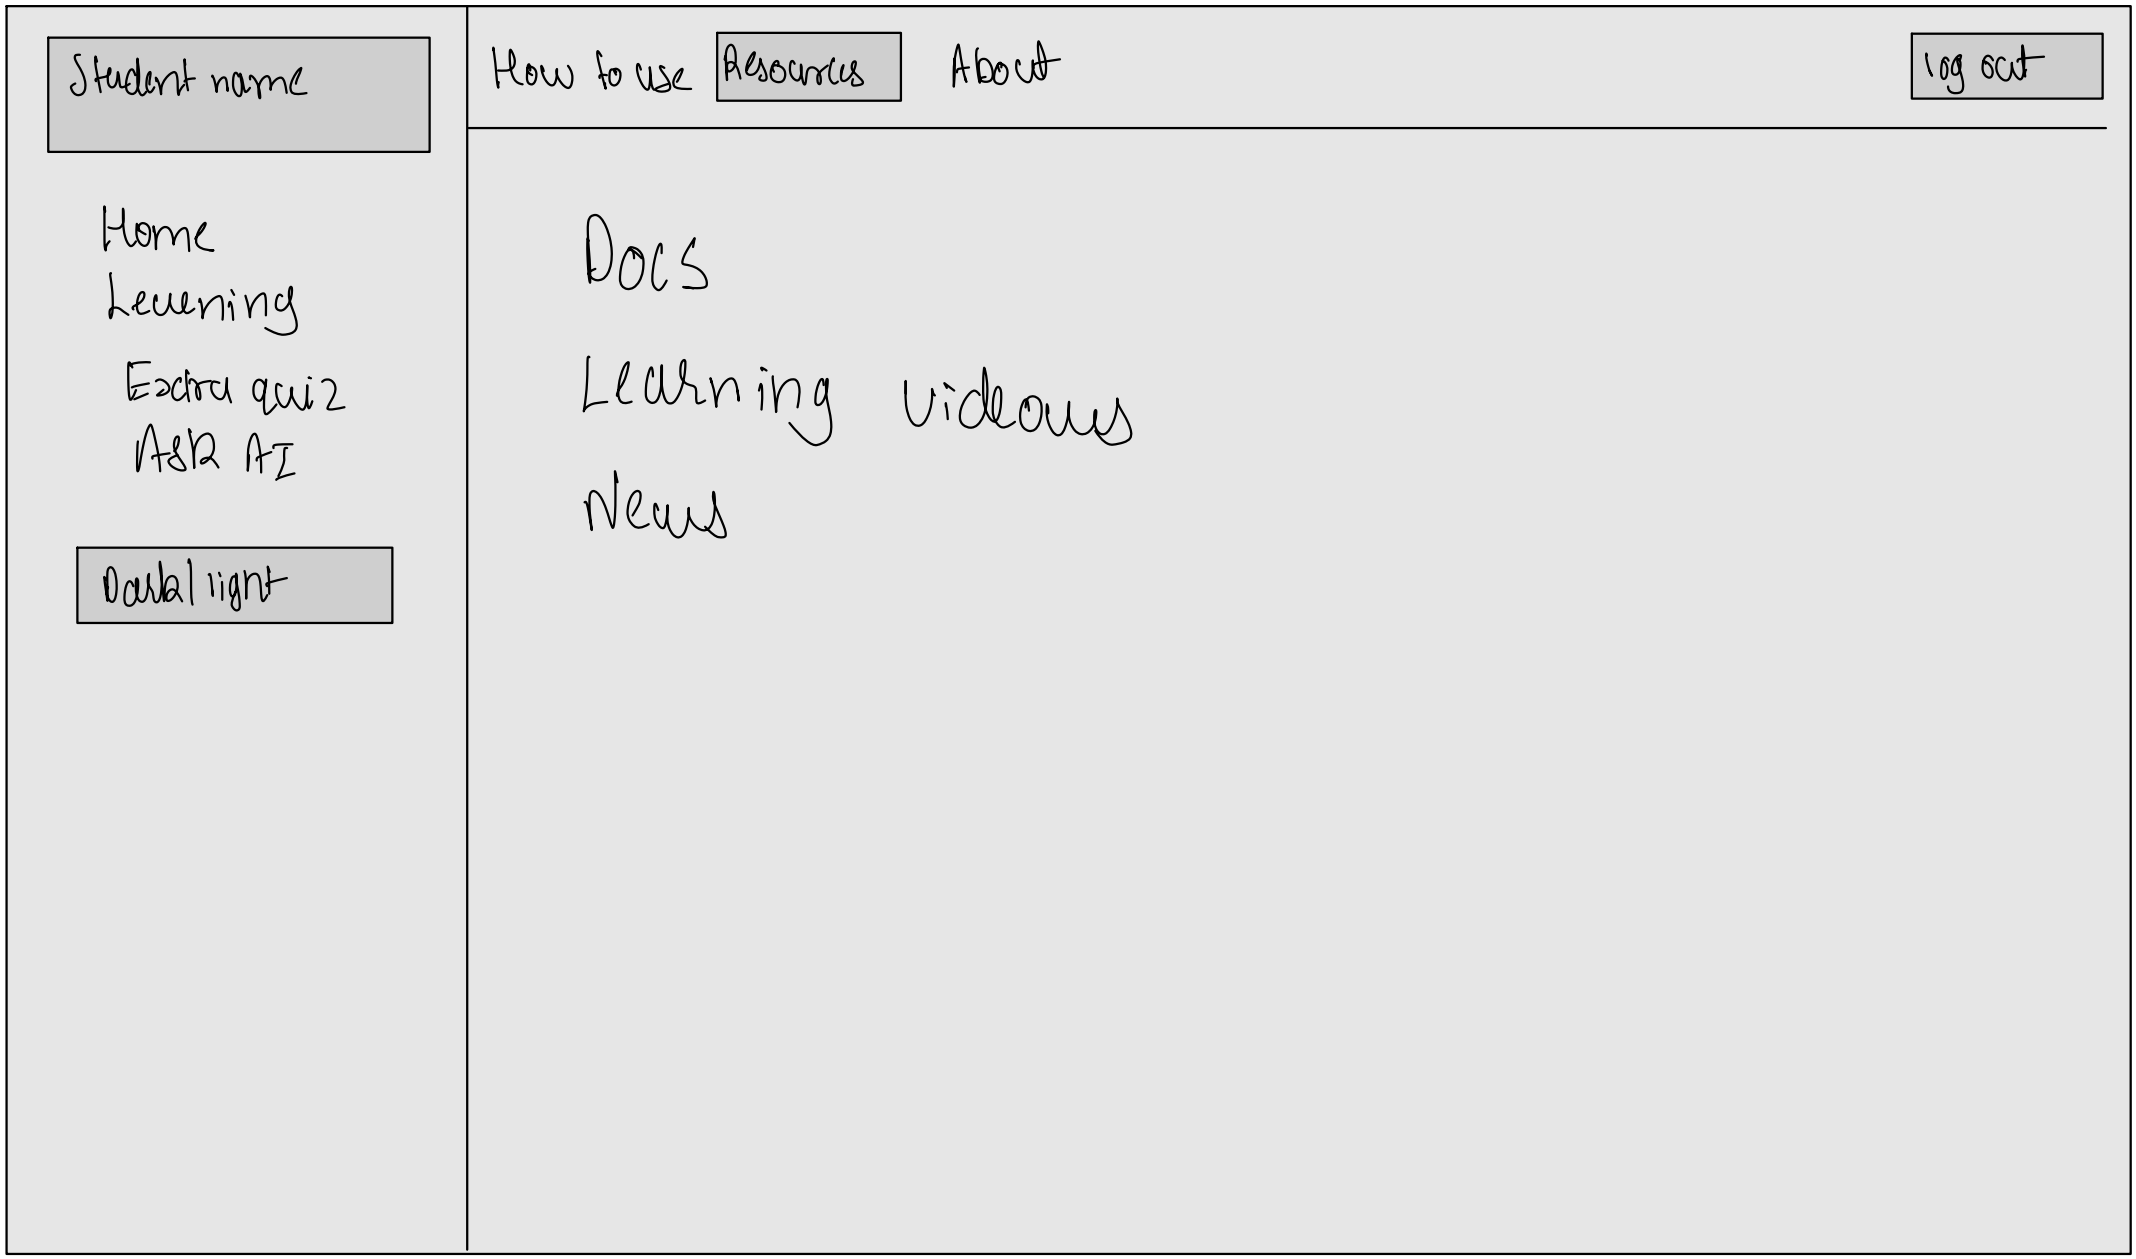
The Extra Quiz page shows the user's quiz progress and allows students to attempt additional quizzes at any time. These quizzes are related to the learning material but are not part of the main learning module. The top bar displays the quiz topic, and the page also provides quiz recommendations based on the student's level.

# Ask AI Page



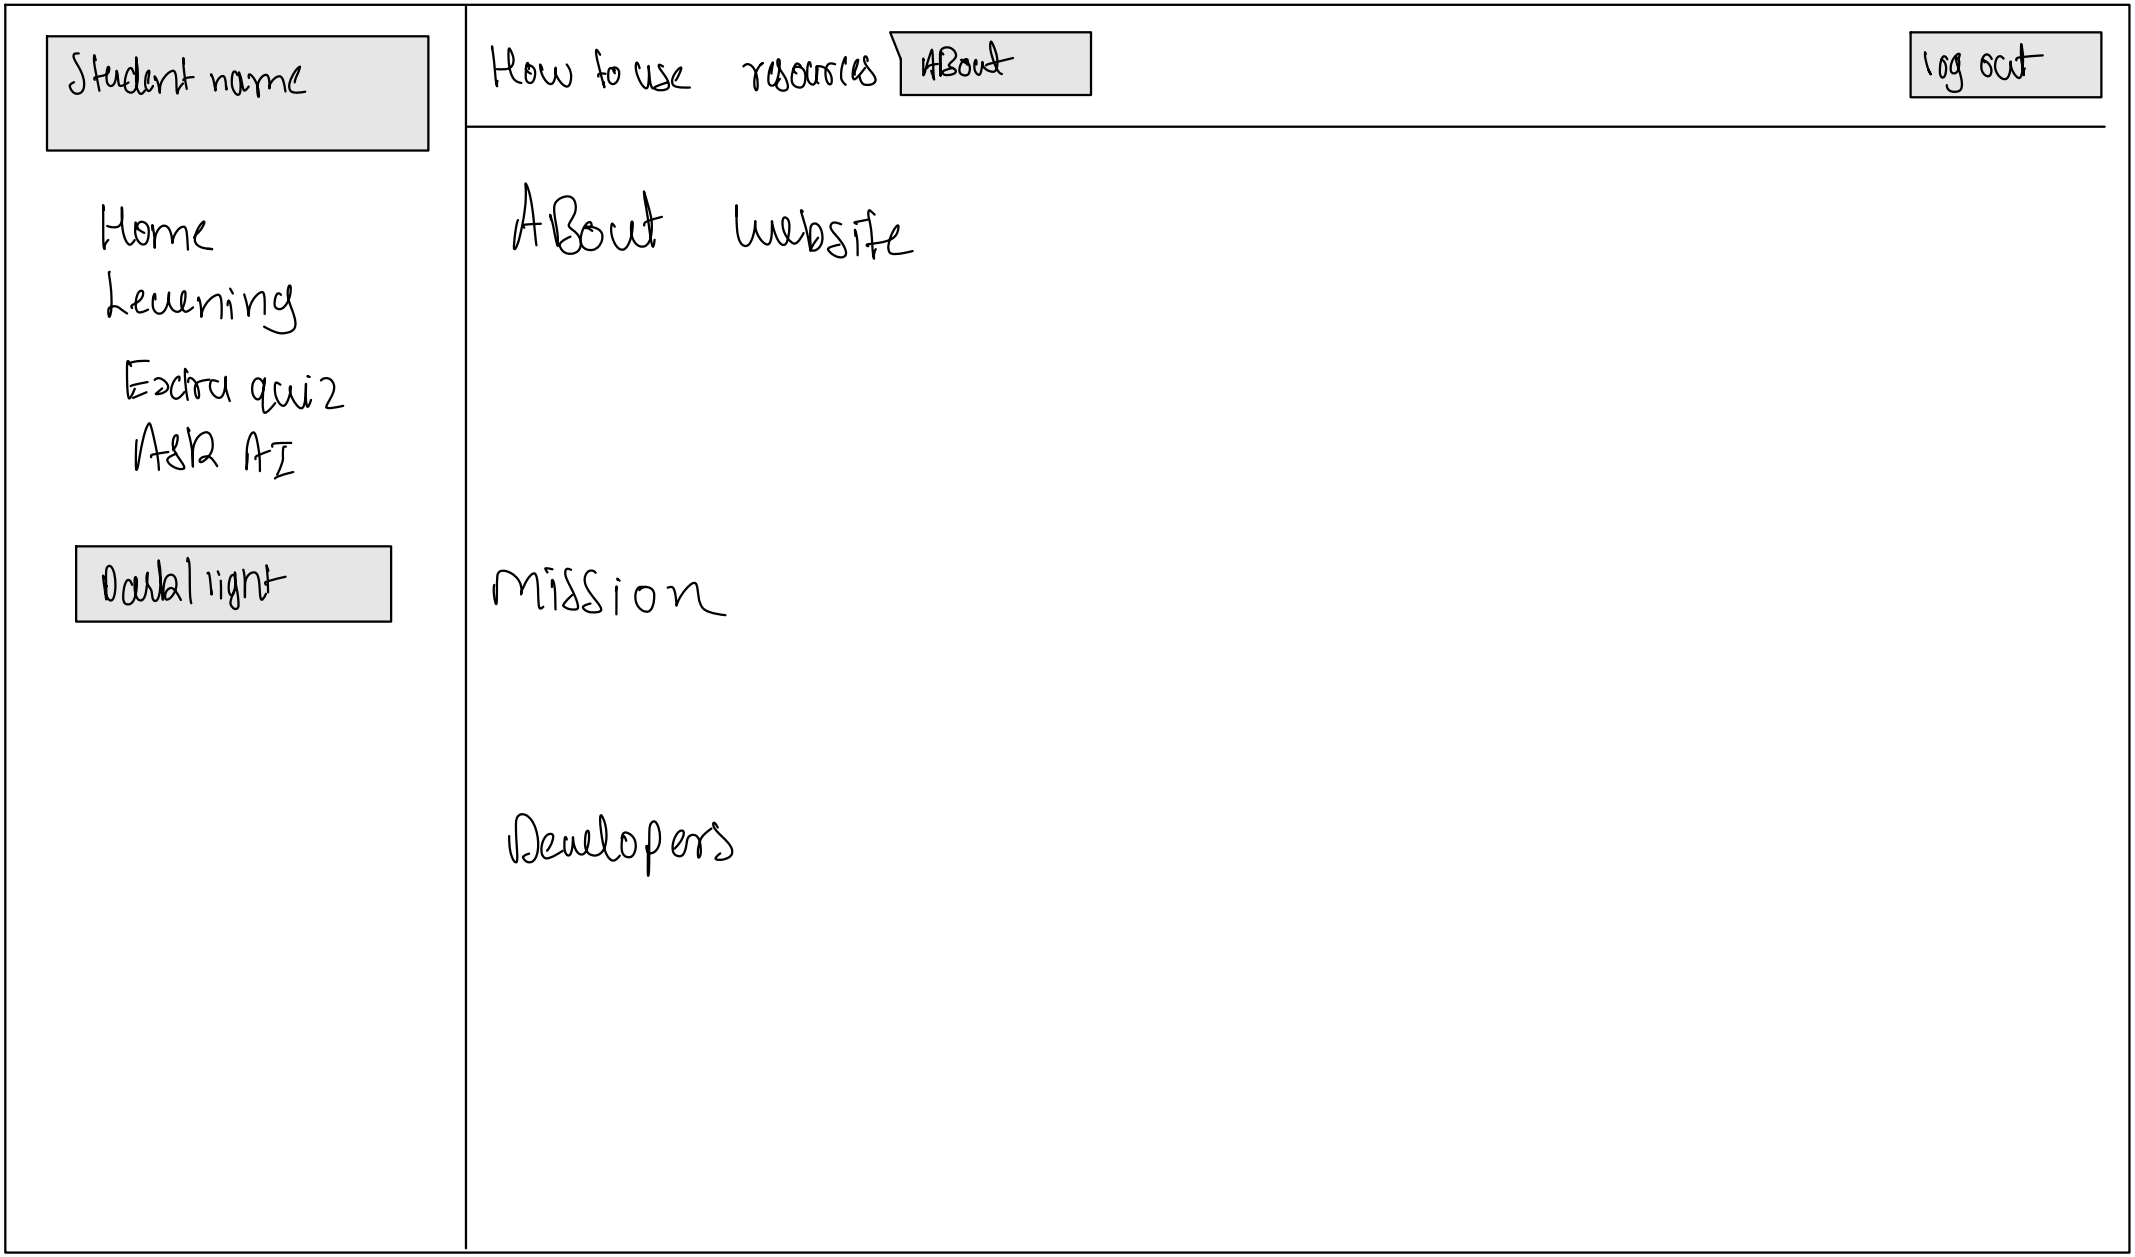
The Ask AI page provides a chat prompt where students can ask questions related to their lessons or coding topics. The AI is limited to answering subject-related queries only and will not respond to unrelated or general questions like a typical AI chatbot.

Resources page



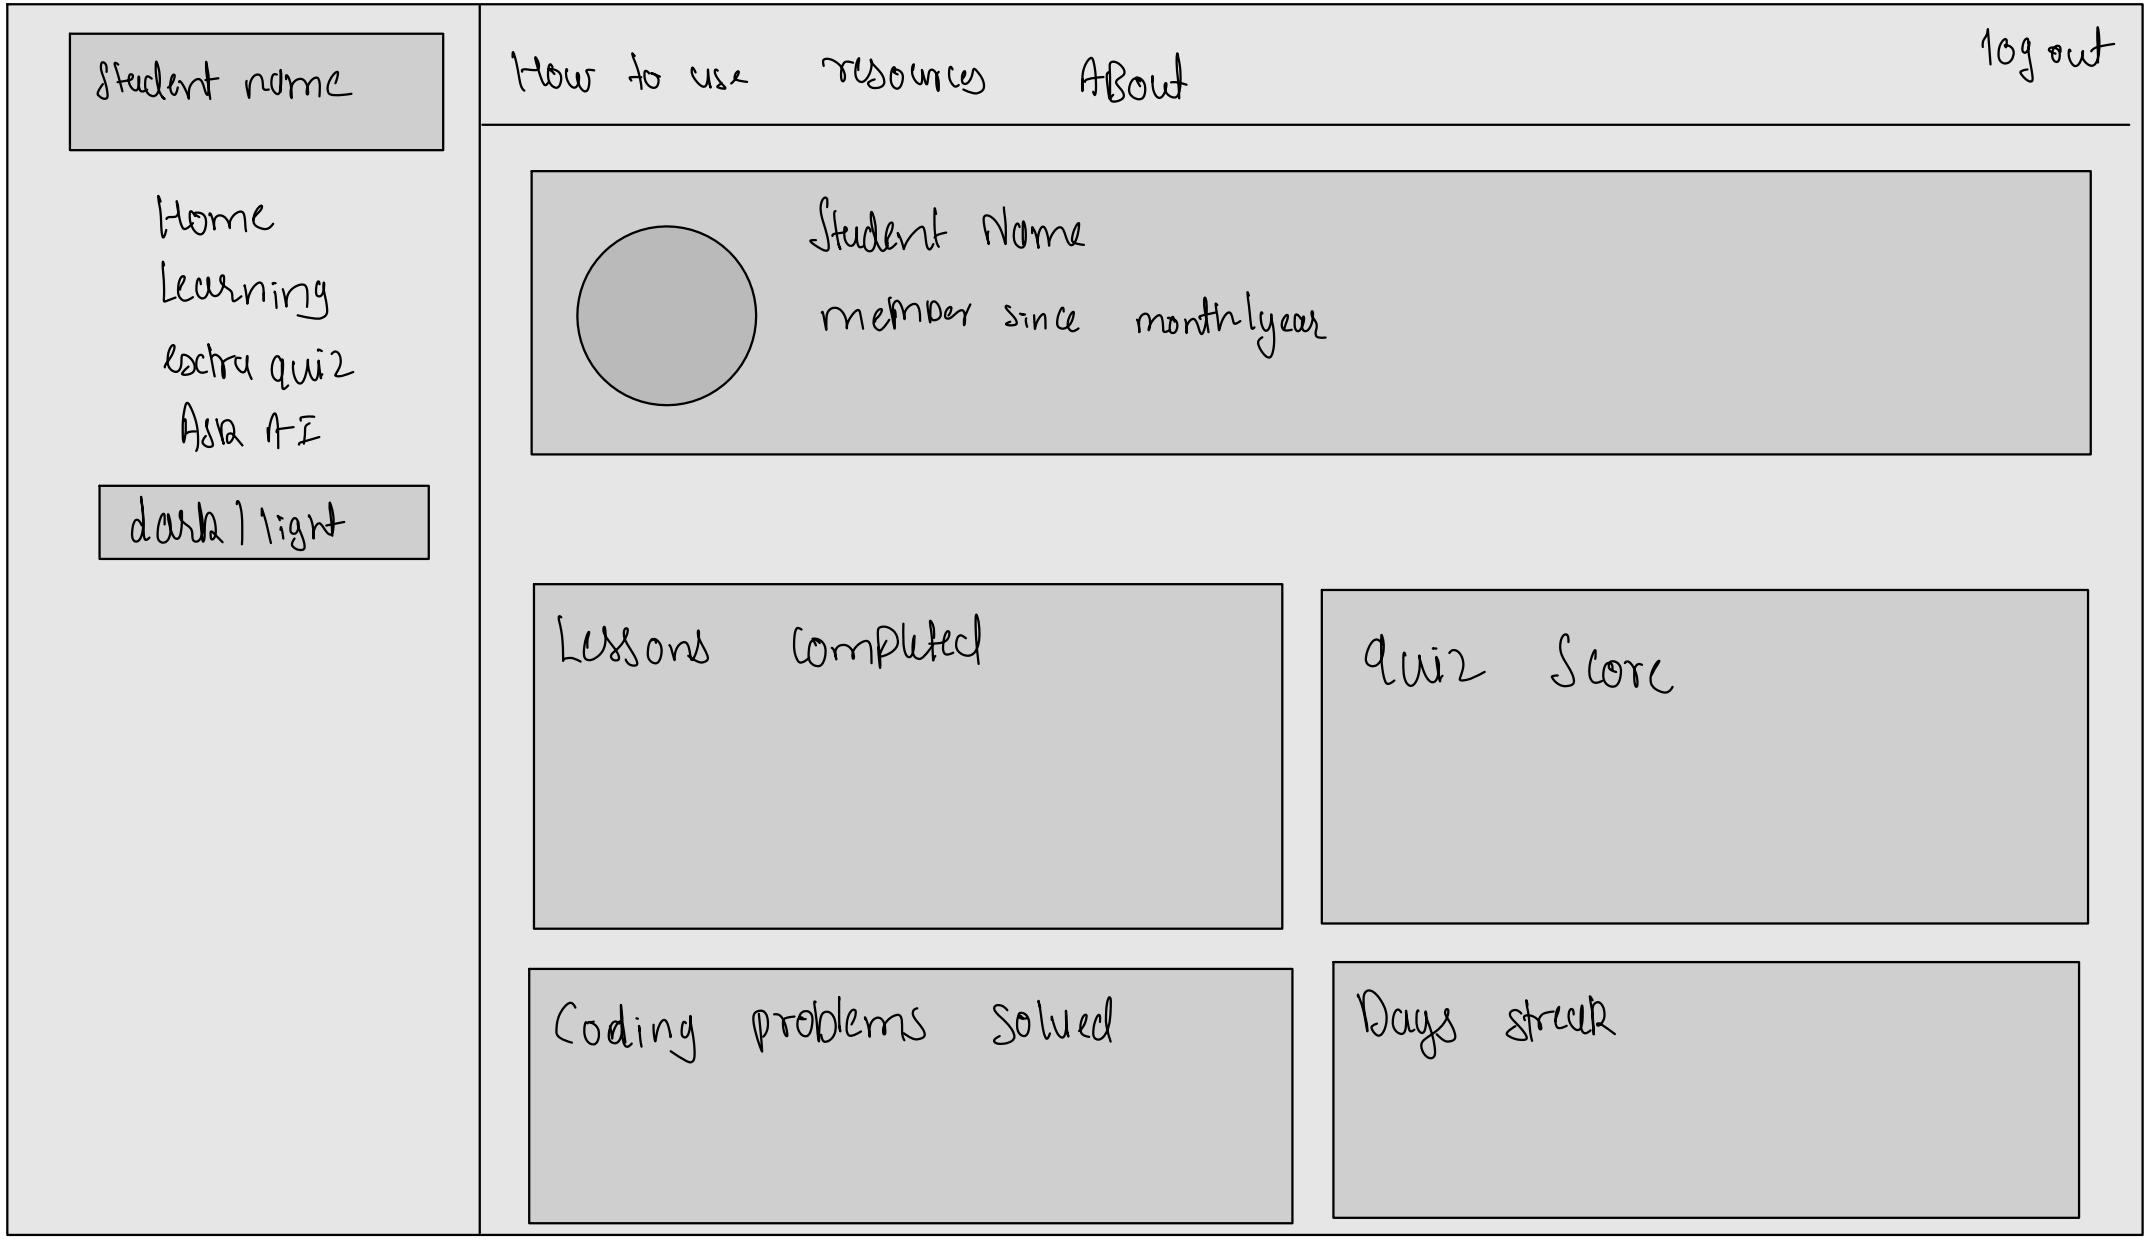
The Resources page includes documents, learning videos, news, and other helpful materials to support students in their learning process.

# About Page



The About page provides information about the website, its goals, and the team that developed it.

# Profile Page



The Profile page displays the student's name and, after their first login, shows various statistics such as lessons completed, coding problems solved, quiz score, and their activity streak — the number of consecutive days they have used the platform without missing a day.

We aimed to create a modern and simple interface using a left-side navigation bar layout. The sidebar remains visible on all pages, allowing users to easily navigate to any section of the website at any time. From any page, users can access the Home, How to Use (dashboard), Extra Quiz, Resources, About, and Profile sections.

The homepage contains interactive components such as lesson cards, quizzes, and puzzles presented as small square tiles with action buttons like Open Lesson or Start Quiz. Users can always view their learning and quiz progress from the main page. By selecting their name in the sidebar, they can open their profile page to see statistics such as completed lessons, solved coding problems, quiz scores, and activity streak.

The interface also includes a dark/light mode toggle and a logout option, available on pages such as the homepage, profile, resources, about, and dashboard pages.
